

Describing a Distribution

Unit 1 · Topic 1.6 · TODAY'S PROBLEM

The histogram shows how long it took 40 students to get to school one morning, in minutes. Two students described the distribution.

Ana: “Roughly symmetric, centered near 20 minutes, spread from 5 to 45 minutes.”

Ben: “Skewed right with a peak in the 10–20 minute interval; most students take under 30 minutes; one student at about 70 minutes is an outlier.”

FIRST TAKE (5 min, on your sheet)

Whose description do you trust more, Ana's or Ben's? One sentence. No wrong answers yet.

DOK 1 (a) Which interval has the tallest bar?

DOK 2 (b) In two or three sentences, describe the commute times: shape, a typical value, overall spread, and one unusual feature. Use minutes.

DOK 3 (c) Whose description is better supported? Use two graph features to defend your choice. Explain why reporting only a typical commute time would leave a reader with an incomplete picture.

Optional review: [follow-along](#) (scan the code)

Work (a)–(c) from the rules on your sheet. Turn in your sheet.
