

# Same Counts, Different Message

Topic 1.4 · TODAY'S PROBLEM

Suppose 184 students chose a favorite lunch option. A newsletter printed **Graph A** with the headline “**Pizza wins by a landslide.**” A council member redrew the data as **Graph B** and said, “It is basically a tie.”

## FIRST TAKE (5 min, on your sheet)

Is pizza clearly the favorite? Name the graph that most influenced you.

- DOK 1** (a) Read the Pizza and Pasta counts. How many more students chose Pizza?
- DOK 2** (b) Convert all four counts to whole-number percents of 184. Describe how close the categories are in context.
- DOK 3** (c) For “Is pizza clearly the favorite?” choose the more honest graph and name the design feature that settles it. Quantify Graph A’s visible Pizza-to-Pasta heights, then compare 52 with 41 using percent increase. Finally, choose a zero-baseline bar graph or pie chart for comparing the four categories and defend that choice.

Finish (a)–(c) after the video. Turn in your sheet.
