

Which Class Did Better?

Unit 1 · Topic 1.9 · THE PROBLEM

Two AP Statistics classes took the same 40-point quiz. The side-by-side boxplots show the scores. Two students read them differently.

Sam: “Period B did better — its highest score is 40 and Period E’s is only 38.” **Tia:** “Period E did better — its median is higher and its scores are more consistent.”

FIRST TAKE — one sentence before you work the parts

Which class did better on the quiz? One sentence, and name ONE feature of the plot you used.

- DOK 1** (a) Read the median for each class.
- DOK 2** (b) In two or three sentences, compare the quiz scores’ center, spread, apparent shape, and unusual features. Use points and comparative words.
- DOK 3** (c) Whose claim is better supported, Sam’s or Tia’s? Cite two specific features of the boxplots that settle it. Then: if you could report only ONE statistic per class to a parent asking ‘how did the class do?’, which statistic would you choose, and why that one rather than the maximum?

Self-paced bonus problem. Work (a)–(c) from this sheet; turn it in whenever you finish.
