

Describing a Distribution

Topic 1.6 · TODAY'S PROBLEM

The histogram shows how long it took 40 students to get to school one morning, in minutes. Two students described the distribution.

Ana: “Roughly symmetric, centered near 20 minutes, spread from 5 to 45 minutes.”

Ben: “Skewed right with a peak in the 10–20 minute interval; most students take under 30 minutes; one student at about 70 minutes is an outlier.”

FIRST TAKE (5 min, on your sheet)

Whose description do you trust more, Ana's or Ben's? One sentence. No wrong answers yet.

- DOK 1** (a) Name the shape of the histogram and state which interval contains the median commute time.
- DOK 2** (b) Describe the distribution of commute times in context. Address shape, center, variability, and any unusual features, with units.
- DOK 3** (c) Whose description could a reader trust when choosing a summary statistic? Cite two specific features of the graph that settle it. Then state which measure of center you would report for these data and why.

Video + follow-along: u1_lesson6_live.html (scan the code)

Finish (a)–(c) after the video. Turn in your sheet.
